In the Claims:

Please cancel claims 1-58 and add the following new claim:

59. A method for supplying to a user of a broadcast receiver auxiliary information about broadcast programs comprising the steps of:
- playing programs from a schedule of broadcast programs at a broadcast receiver;
  - mapping SDT data representative of the station, day and time of the respective programs of the schedule to auxiliary information about the respective programs in a memory at a central location remote from the receiver;
  - storing SDT data for a particular program selected by the user from among the programs being played at the receiver;
  - conveying the stored SDT data to the central location;
